

04.05.2009 - News Item: ASTM D 1250-08

ASTM D 1250-08 “Standard Guide for Use of the Petroleum Measurement Tables” has been published in April 2009, after approval on Sep. 1, 2008.

QuantityWare has carefully analyzed this edition of ASTM D 1250.

The subcommittee D02.02/COMQ has added a new adjunct whereby API MPMS Chapter 11.5 Parts 1-3 supersedes Chapter 11.1 – 1980 Volume XI/XII.

With the publication of the ASTM D 1250-08 edition, clear guidance concerning all available relevant API MPMS Chapters for petroleum measurement calculations is provided.

Since the 1980 edition computer implementations based on integer arithmetic, including the usage of the 1980 table versions, may still be in use at many sites globally, ASTM D1250-80 is included into the mandatory annex of ASTM D 1250-08, in the same manner as ASTM D 1250-07 beforehand.

As already detailed in our news item from 15.04.2009, QuantityWare has carefully analyzed API MPMS Chapter 11.5. With our next service pack, (BCP 10A SP12) in Q3 2009, a complete implementation of API MPMS Chapter 11.5 will be shipped.

QuantityWare BCP 10A customers can then choose from our global template conversion groups that are based on either of the 1952, 1980, 2004, 2007 or 2008 editions of ASTM D 1250, fulfilling our customers unique contractual and governmental requirements.
