

## 19.02.2010 - News Item: BCP 10B & BCG 10B – configuration template – language support

---

With Bulk Calculations – Petroleum (BCP) and Bulk Calculations – Gas (BCG) QuantityWare delivers two state-of-the-art quantity conversion solutions to the oil and gas, and allied industries. Both BCP and BCG are delivered with a rich and complete configuration template from which customers can easily select configuration in order to meet their requirements.

With BCP 10B and BCG 10B QuantityWare delivers all language dependent template configuration data for the following languages (in alphabetical order):

- English
- French
- Portuguese
- Spanish

### Details:

The BCP and BCG templates each contain more than 350 unit of measure definitions and more than 400 conversion groups and reading groups, all of which are visible to business users. All translations are based on international standards (unit of measure texts and symbols) and business terminology standards (e.g. API MPMS).

All implementation projects based on these four languages will be able to benefit immediately from this template extension. Project teams can configure all quantity conversions directly using the language specific template settings.

You can access the complete BCP or BCG conversion template via the Petroleum Measurement Cockpit or Gas Measurement Cockpit using any of the above defined languages.
