Compliance &
Transparency –
Gas

 QuantityWare

CTG

Why CTG?

Compliance & Transparency – Gas (CTG) is **the** SAP Oil & Gas solution for dry natural gas, LNG and NGL quantity conversion monitoring.

Fully integrated with the SAP Oil & Gas solution, CTG enables simple-to-deliver transparency and GRC framework application to the bottom-line of your business – bulk goods quantity conversion management.

CTG is a part of the QuantityWare Bulk Calculations Solution (BCS).

GRC – Governance, Risk & Compliance

- Governance – enable through delivery of transparent and compliant quantity conversion information
- Risk – assess and define with transparency in all areas of your SAP Oil & Gas system quantity conversions
- Compliance – documents your currently used measurement standards

Transparency

- CTG provides immediate clarity and precise definition.
- Via the QuantityWare Gas Measurement Cockpit (GMC), view and prove the definition of your business' fundamental values, satisfying customers, regulatory bodies and internal control instances.
- Your business is bulk materials movements, without full transparency and reliability, other GRC efforts are without foundation.

Due Diligence

- Success, security and integrity are fundamental to your business.
- Vast amounts of data are received from “the field” containing material volumes, energy equivalents etc.
- With CTG, assess the accuracy of field data and provide your business with a “check and balance” – explain and understand the numbers and ensure due diligence in your business activities.

Reduced Expenditure, Increased Flexibility

- Business times are turbulent; plan ahead by leveraging CTG to execute theoretical, non-productive calculations in any supported standard.

Proven Quality

- Since 2009, CTG functionality has been in productive usage across multiple SAP release levels.
- CTG functionality is used multiple customers across the globe.
- CTG can protect projects against causing considerable financial and business impact to customer organizations.

Service and Support

- Service Portal – All customer issues are important, thus we offer a comprehensive support service via our service portal.
- Certified Consultants – A global network of QuantityWare-certified consultants offers our customers implementation support and consulting security.

Complete Solution

CTG is a part of BCS; a multi-faceted solution consisting of:

- SAP ABAP-based software functionality
- Project Assessment and Implementation Guidelines “PAIG”
- Expert support and development
- Online service portal
- Full documentation
- Certification training
- Working papers

CTG Facts

- Supports all QCI-compatible calculations
- Runs exclusively on the ABAP-stack.
- Uses SAP-defined technical packages, thus handling is familiar to basis services.
- Uses an SAP-defined object name-range and is non-modifying.
- Guarantees software quality through automated testing and technical procedures.
- Uses standard SAP transport methods for customizing and configuration, adhering to existing quality and security policies.
- Allows efficient issue resolution through provision of corrections via CTS transports.
- Part of the SAP-certified QuantityWare Bulk Calculations Solution (BCS)
- Quantityware BCS is a “SAP Certified Integration” on both the ECC and S/4HANA platforms.
