

# CTP

Compliance &  
Transparency –  
Petroleum

# Why CTP?

Compliance & Transparency - Petroleum (CTP) is the SAP Oil, Gas, and Energy solution for crude oil and products quantity conversion monitoring.

Fully integrated with the SAP Oil, Gas, and Energy solution, CTP enables simple-to-deliver transparency and GRC framework application to the bottom-line of your business - bulk goods quantity conversion management.

CTP is a part of the QuantityWare Bulk Calculations Solution (BCS).

## GRC - Governance, Risk & Compliance

- Governance - enable through delivery of transparent and compliant quantity conversion information
- Risk - assess and define transparently in all areas of your SAP Oil, Gas, and Energy system quantity conversions
- Compliance - documents your currently used measurement standards

## Transparency

- CTP provides immediate clarity and precise definition.
- Via the QuantityWare Petroleum Measurement Cockpit (PMC), view and prove the definition of your business' fundamental values, satisfying customers, regulatory bodies and internal control instances.
- Your business is bulk materials movements, without full transparency and reliability, other GRC efforts are without foundation.

## Due Diligence

- Success, security and integrity are fundamental to your business.
- Vast amounts of data are received from "the field" containing material volumes, energy equivalents etc.
- With CTP, assess the accuracy of field data and provide your business with a "check and balance" - explain and understand the numbers and ensure due diligence in your business activities.

## Reduced Expenditure, Increased Flexibility

- Business times are turbulent; plan ahead by leveraging CTP to execute theoretical, non-productive calculations in any supported standard.

## Proven Quality

- Since 2009, CTP functionality has been in productive usage across multiple SAP release levels.
- CTP functionality is used by over 70 customers in over 35 countries on 5 continents.
- CTP can protect projects against causing considerable financial and business impact to customer organizations.

## Service and Support

- Service Portal - All customer issues are important, thus we offer a comprehensive support service via our service portal.
- Certified Consultants - A global network of QuantityWare-certified consultants offers our customers implementation support and consulting security.

## Complete Solution

CTP is a part of BCS; a multi-faceted solution consisting of:

- SAP ABAP-based software functionality
- Project Assessment and Implementation Guidelines "PAIG"
- Expert support and development
- Online service portal
- Full documentation
- Certification training
- Working papers

## CTP Facts

- Supports all QCI-compatible calculations
- Runs exclusively on the ABAP-stack.
- Uses SAP-defined technical packages, thus handling is familiar to basis services.
- Uses an SAP-defined object name-range and is non-modifying.
- Guarantees software quality through automated testing and technical procedures.
- Uses standard SAP transport methods for customizing and configuration, adhering to existing quality and security policies.
- Allows efficient issue resolution through provision of corrections via CTS transports.
- Part of the SAP-certified QuantityWare Bulk Calculations Solution (BCS)
- QuantityWare BCS is a "SAP Certified Integration" on both the ECC and S/4HANA platforms.
