Note: 000057

Overview

Number	**000057**
Description	**Virtual Forge Certification - Deletion of Obsolete Reports**
Version	**2 from 10.07.2017**
Status	**Released to Customer**
Language	**EN**
Responsible	**Markus Seng**
Product	**BCS**
Category	**Advanced Development**

Symptom

In September 2014, QuantityWare BCS 10B was awarded the "Certified by Code Profiler" Certificate by Virtual Forge. All ABAP code enhancements encompassed in this certification project were delivered with BCS 10B CSP03. 30 QuantityWare Measurement Cockpit Reports were identified as being obsolete.

SAP Software Logistics "Best Practices" forbid the deletion of objects that have been delivered to customers, or only with specific documentation during release changes; thus the coding of the obsolete reports has been removed and an information message is issued if one of these reports is executed. Since these reports do not contain any executable ABAP code, they are not equipped with a recognized authorization check, therefore customer security analysis may still list these reports as security issues.

Solution

To assist customers in clarifying security concerns without contravening Software Logistics Best Practices, a deletion transport has been made available with this note. Customers may apply this transport to their systems, at their own risk. The objects listed have been checked by QuantityWare in

their standard, non-modified customer delivery consolidation systems and have been found to be unused and therefore harmless if deleted. The content of this transport is included in BCS 3.0. For customers upgrading from an earluer version of BCS or BCP, the deletion will take place automatically at this point in time.

Customers should check their systems for possible usage of these objects.

The table below lists all objects that will be deleted if this transport is applied to your system:
