Note: 000091

Overview

Number	**000091**
Description	**Scenarios: Calculate expected results fails**
Version	**2 from 08.06.2020**
Status	**Released to Customer**
Language	**EN**
Responsible	**Guido Jager**
Product	**BCS**
Category	**Correction - PMC & GMC**

Symptom

You have applied technical note 88 "Test Scenario Tool Corrections".
You use the parameter FIXDENSITY in the "Reading Group Entries" of your conversion group.
When creating or changing a Test Scenario you receive the error message /QTYW/BCC406 "Calculation: Inconsistent data "while trying to "Calculate expected results"(Ctrl+F1).

Cause

The "fixed density(FIXDENSITY)" is an attribute of the material master. As the material is not known in a Test Scenario, the "fixed density(FIXDENSITY)" has to be substituted by the "density at test conditions(OBSTSTDENS)" before the quantity calculations are performed. There was a program error in the substitution logic.

Solution

Apply the referenced transport to resolve this issue.
