Definition

Generally, QuantityWare GmbH (QW) offers all prospective customers "Test Usage Keys" encompassing:

- access to full functionality for the products BCP and BCG.
- for a maximum of one (1) SID
- with a validity of four (4) weeks from a customer-defined date
- for non-productive usage

(ref.: https://www.quantityware.com/our-solution/pricing/) under the conditions a defined in the QuantityWare "Test Usage Agreement" (see QW web-site Knowledge Base).

SAP Standard Content O&G (ex. "SAP Model Company Oil & Gas"):

QW considers that SAP offers great value to customers with its industry content offerings; for this reason, QW has undertaken to provide test usage keys to customers using such offerings for the time in which SAP is performing any necessary post-installation validation tasks at the customer, even if this exceeds four (4) or eight (8) weeks from the requested activation date of the QW test usage keys.

All Prospective Customers:

NOTE 01: Once a customer has entered the User Acceptance Testing (UAT) Phase (or comparable) of an implementation project and QW functionality is required for completion of same, the customer must possess valid productive usage keys.

NOTE 02: If the QW solution is not used for a period of time during an implementation project (e.g. functions are implemented that do not include the usage of SAP Oil & Gas bulk goods, HPM and therefore bulk quantity calculations) then a usage key is not required. QW does not modify SAP Oil & Gas in any way; if QW functionality is not required, it is dormant in the system and will not affect any other business process.

If QW functionality if accessed for configuration and testing purposes, then a usage key is required to activate the solutions' calculations functions.

Upon customer request, new test usage keys will be granted by QW if there has been a discontinuation in usage for two months or more owing to a scenario previously described in "NOTE 02".

Customers and/or SAP are welcome to approach QW (by opening a ticket in the QW support portal – https://service.quantityware.com) and define specific project usage requirements.
