1. ASTM D1250-80 and ASTM D1250-04 - 90 % grid results

Editorial Note:

The decimal point and thousand separators for numbers and quantity values for this document are defined as follows: The decimal point is a comma ',', the thousand separator is a dot '.'. Example: 123.456.789,987

1.1. Table 5A – crude oil, 60 °F base temperature – detailed results

Comparison grid:

Observed temperature: 14 °F to 104 °F, increment 0,2 °F

Observed density: -10 °API to 100 °API, increment 0,1 °API

Quantity compared: Base API gravity @ 60 °F

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDD1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDD1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

1.2. Table 5B – products, 60 °F base temperature – detailed results

Comparison grid:

Observed temperature: 14 °F to 104 °F, increment 0,2 °F

Observed density: -10 °API to 100 °API, increment 0,1 °API

Quantity compared: Base API gravity @ 60 °F

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

1.3. Table 5D – lubricants, 60 °F base temperature – detailed results

Comparison grid:

Observed temperature: 14°F to 104 °F, increment 0,2 °F

Observed density: -10 °API to 45 °API, increment 0,1 °API

Quantity compared: Base API gravity @ 60 °F

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

1.4. Table 23A – crude oil, 60 °F base temperature – detailed results

Comparison grid:

Observed temperature: 14 °F to 104 °F, increment 0,2 °F

Observed density: 0,6112 relative density to 1,1646 relative density, increment 0,0001 relative density

Quantity compared: Base relative density @ 60 °F

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDD1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDD1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

Results ASTM D1250-80 standard rounding:

1.8. Table 53B – products, 15 °C base temperature – detailed results

Comparison grid:

Observed temperature: -10 °C to 40 °C, increment 0,1 °C

Observed density: 611,2 kg/m³ to 1.163,9 kg/m³, increment 0,2 kg/m³

Quantity compared: Base density / kg/m³ @ 15 °C

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

1.9. Table 53D – lubricants, 15 °C base temperature – detailed results

Comparison grid:

Observed temperature: -10 °C to 40 °C, increment 0,1 °C

Observed density: 801,3 kg/m³ to 1.163,9 kg/m³, increment 0,1 kg/m³

Quantity compared: Base density / kg/m³ @ 15 °C

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

1.10. Table 59A – crude oil, 20 °C base temperature – detailed results

Comparison grid:

Observed temperature: -5 °C to 45 °C, increment 0,1 °C

Observed density: 606,1 kg/m³ to 1.161,2 kg/m³, increment 0,1 kg/m³

Quantity compared: Base density / kg/m³ @ 20 °C

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDD1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDD1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

Results ASTM D1250-80 standard rounding:

1.11. Table 59B – products, 20 °C base temperature – detailed results

Comparison grid:

Observed temperature: -5 °C to 45 °C, increment 0,1 °C

Observed density: 606,1 kg/m³ to 1.160,6 kg/m³, increment 0,1 kg/m³

Quantity compared: Base density / kg/m³ @ 20 °C

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

Results ASTM D1250-80 standard rounding:

1.12. Table 59D – lubricants, 20 °C base temperature – detailed results

Comparison grid:

Observed temperature: -5 °C to 45 °C, increment 0,1 °C

Observed density: 798,1 kg/m³ to 1.160,7 kg/m³, increment 0,1 kg/m³

Quantity compared: Base density / kg/m³ @ 20 °C

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

1.13. Table 6A – crude oil, 60 °F base temperature – detailed results

Comparison grid:

Observed temperature: 14 °F to 104 °F, increment 0,2 °F

Base density @ 60 °F: -10 °API to 100 °API, increment 0,2 °API

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P: % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations – 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations – 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations – deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations – deviation above one result grid increment: $(NDG1 / NSC) * 100$

1.14. Table 6B – products, 60 °F base temperature – detailed results

Comparison grid:

Observed temperature: 14 °F to 104 °F, increment 0,2 °F

Base density @ 60 °F: -10 °API to 100 °API, increment 0,2 °API

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations – 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations – 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations – deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations – deviation above one result grid increment: $(NDG1 / NSC) * 100$

1.15. Table 6C – special applications, 60 °F base temperature – detailed results

Comparison grid:

Observed temperature: 14 °F to 104 °F, increment 0,2 °F

Thermal expansion coefficient @ 60 °F: 0,0002300 1 /°F to 0,0009300 1/ °F, increment 0,0000001

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDD1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

TTLCB: Thermal expansion coefficient for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations – 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations – 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations – deviation one result grid increment: $(NDD1 / NSC) * 100$

PX: % value of deviations – deviation above one result grid increment: $(NDG1 / NSC) * 100$

1.16. Table 6D – lubricants, 60 °F base temperature – detailed results

Comparison grid:

Observed temperature: 14 °F to 104 °F, increment 0,2 °F

Base density @ 60 °F: -10 °API to 45 °API, increment 0,1 °API

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations – 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations – 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations – deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations – deviation above one result grid increment: $(NDG1 / NSC) * 100$

1.17. Table 24A – crude oil, 60 °F base temperature – detailed results

Comparison grid:

Observed temperature: 14 °F to 104 °F, increment 0,2 °F

Base relative density @ 60 °F: 0,6112 to 1,1646, increment 0,1

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations – 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations – 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations – deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations – deviation above one result grid increment: $(NDG1 / NSC) * 100$

1.18. Table 24B – products, 60 °F base temperature – detailed results

Comparison grid:

Observed temperature: 14 °F to 104 °F, increment 0,2 °F

Base relative density @ 60 °F: 0,6112 to 1,1646, increment 0,1

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations – 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations – 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations – deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations – deviation above one result grid increment: $(NDG1 / NSC) * 100$

1.19. Table 24C – special applications, 60 °F base temperature – detailed results

Comparison grid:

Observed temperature: 14 °F to 104 °F, increment 0,2 °F

Thermal expansion coefficient @ 60 °F: 0,0002300 1 /°F to 0,0009300 1/ °F, increment 0,0000001

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDD1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

TTLCB: Thermal expansion coefficient for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations – 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations – 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations – deviation one result grid increment: $(NDD1 / NSC) * 100$

PX: % value of deviations – deviation above one result grid increment: $(NDG1 / NSC) * 100$

VCF - 5 decimals

1.20. Table 24D – lubricants, 60 °F base temperature – detailed results

Comparison grid:

Observed temperature: 14 °F to 104 °F, increment 0,2 °F

Base relative density @ 60 °F: 0,8017 to 1,1646, increment 0,1

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P: % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations – 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations – 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations – deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations – deviation above one result grid increment: $(NDG1 / NSC) * 100$

1.21. Table 54A – crude oil, 15 °C base temperature – detailed results

Comparison grid:

Observed temperature: -10 °C to 40 °C, increment 0,1 °C

Base density @ 15 °C: 611,2 kg/m³ to 1.163,8 kg/m³, increment 0,1 kg/m³

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

Results ASTM D1250-80 standard rounding

VCF - 5 decimals

1.22. Table 54B – products, 15 °C base temperature – detailed results

Comparison grid:

Observed temperature: -10 °C to 40 °C, increment 0,1 °C

Base density @ 15 °C: 611,2 kg/m³ to 1.163,9 kg/m³, increment 0,1 kg/m³

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDI1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P: % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDI1 / NSC) * 100$

Results ASTM D1250-80 standard rounding

1.23. Table 54D – lubricants, 15 °C base temperature – detailed results

Comparison grid:

Observed temperature: -10 °C to 40 °C, increment 0,1 °C

Base density @ 15 °C: 801,3 kg/m³ to 1.163,9 kg/m³, increment 0,1 kg/m³

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDI1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P: % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDI1 / NSC) * 100$

Results ASTM D1250-80 standard rounding

1.24. Table 60A – crude oil, 20 °C base temperature – detailed results

Comparison grid:

Observed temperature: -5 °C to 45 °C, increment 0,1 °C

Base density @ 20 °C: 606,1 kg/m³ to 1.161,2 kg/m³, increment 0,1 kg/m³

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

Results ASTM D1250-80 standard rounding

VCF - 5 decimals

1.25. Table 60B – products, 20 °C base temperature – detailed results

Comparison grid:

Observed temperature: -5 °C to 45 °C, increment 0,1 °C

Base density @ 20 °C: 611,2 kg/m³ to 1.160,6 kg/m³, increment 0,1 kg/m³

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

Results ASTM D1250-80 standard rounding

VCF - 5 decimals

1.26. Table 60D – lubricants, 20 °C base temperature – detailed results

Comparison grid:

Observed temperature: -5 °C to 45 °C, increment 0,1 °C

Base density @ 20 °C: 798,1 kg/m³ to 1.160,7 kg/m³, increment 0,1 kg/m³

Quantity compared: Volume correction factor observed to base (5 & 4 decimals rounding)

Absolute numbers:

NSC: Number of successful calculations (may be smaller than calculated grid points)

NDF: Number of deviations found

NDG: Number of deviations where 2004 result lies above 1980 result

NDL: Number of deviations where 2004 result lies below 1980 result

NDI1: Number of deviations which differ by one result grid rounding increment

NDG1: Number of deviations which differ by more than one result grid rounding increment

MAXD: Maximum deviation found

TLCB: Temperature value closest to base at which maximum deviation occurs

DTLCB: Density value for closest temperature value where maximum deviation occurs

Calculated % ratios:

P : % value of differences: $(NDF / NSC) * 100$

PG: % value of deviations - 2004 value above 1980 value: $(NDG / NDF) * 100$

PL: % value of deviations - 2004 value below 1980 value: $(NDL / NDF) * 100$

P1: % value of deviations - deviation one result grid increment: $(NDI1 / NSC) * 100$

PX: % value of deviations - deviation above one result grid increment: $(NDG1 / NSC) * 100$

Results ASTM D1250-80 standard rounding

VCF - 5 decimals
